QUESTIONS 10 / 10 completed

AVL Tree- Insert Ele ▾

**AVL TREE-
INSERT
ELEMENTS**

"Write a program to create an AVL Tree and insert the following elements:
50, 30, 70, 20, 40, 60, 80.
Construct the AVL Tree, Display the tree using Inorder Traversal, Verify that the height balance property is maintained after each insertion."

PROGRAM EDITOR

C ▾ Run Save

```
1 #include <stdio.h>
2 #include <stdlib.h>
3
4 struct Node {
5     int key;
6     struct Node *left;
7     struct Node *right;
8     int height;
9 };
10
11 int max(int a, int b) {
12     return (a > b) ? a : b;
13 }
14
15 int height(struct Node *N) {
16     if (N == NULL)
17         return 0;
18     return N->height;
19 }
20
21 struct Node* newnode(int key) {
```

INPUT

QUESTIONS 10 / 10 completed

AVL Tree- Balancing ▾

**AVL TREE-
BALANCING**

Insert the elements: 30, 20, 10 Use C Language to implement the Process. Show the AVL Tree before balancing. Perform the required rotation. Display the balanced AVL Tree. Calculate the balance factor of each node.

PROGRAM EDITOR

C ▾ Run Save

```
1 #include <stdio.h>
2 #include <stdlib.h>
3
4 struct Node {
5     int key;
6     struct Node *left;
7     struct Node *right;
8     int height;
9 };
10
11 int height(struct Node *N) {
12     if (N == NULL)
13         return 0;
14     return N->height;
15 }
16
17 int max(int a, int b) {
18     return (a > b) ? a : b;
19 }
20
21
```

QUESTIONS 10 / 10 completed

AVL Tree -Balance |

**AVL TREE -
BALANCE NODE**

Create an AVL Tree from user-entered values and perform following tasks.Calculate the height of every node. Determine the balance factor of each node. Display nodes that violate AVL property before balancing.

PROGRAM EDITOR

C

Run

Save

```
1 #include <stdio.h>
2 #include <stdlib.h>
3
4 struct Node {
5     int key;
6     struct Node *left;
7     struct Node *right;
8     int height;
9 };
10
11 int height(struct Node *n) {
12     if (n == NULL) return 0;
13     return n->height;
14 }
15
16 int max(int a, int b) {
17     return (a > b) ? a : b;
18 }
19
20 struct Node* newNode(int key) {
21     struct Node* node = (struct Node*)malloc(sizeof(struct Node));
```

OUTPUT

Enter number of values: Enter values:

INPUT

root = insert(root, 30);
root = insert(root, 20);
root = insert(root, 10);

QUESTIONS 10 / 10 completed

AVL Tree - Deletior

AVL TREE - DELETION

Write a C program to delete a node 88 from an AVL Tree and rebalance the tree if necessary. Use the following elements 77, 22, 99, 55, 88, 33, 11, 66, 44.

PROGRAM EDITOR
C Run Save

```
1 #include <stdio.h>
2 #include <stdlib.h>
3
4 typedef struct Node {
5     int key;
6     struct Node *left, *right;
7     int height;
8 } Node;
9
10 int max(int a, int b) { return (a > b) ? a : b; }
11
12 int height(Node *n) {
13     return (n == NULL) ? 0 : n->height;
14 }
15
16 Node* newNode(int key) {
17     Node* n = (Node*)malloc(sizeof(Node));
18     n->key = key;
19     n->left = n->right = NULL;
20     n->height = 1; // height of leaf node
21     return n;
22 }
```

OUTPUT
Inorder before deletion: 11 22 33 44 55 66 77 88 99

QUESTIONS 10 / 10 completed

AVL Tree- Height

AVL TREE- HEIGHT

Write a C program to find the height of an AVL Tree. Create an AVL Tree 50 30 20 40 70 60. Display height after each insertion.

PROGRAM EDITOR
C Run Save

```
1 #include <stdio.h>
2 #include <stdlib.h>
3
4 // Structure for an AVL tree node
5 struct Node {
6     int key;
7     struct Node *left;
8     struct Node *right;
9     int height;
10 };
11
12 // Function to get the height of the tree
13 int getHeight(struct Node *N) {
14     if (N == NULL)
15         return 0;
16     return N->height;
17 }
18
19 // Helper function to get maximum of two integers
20 int max(int a, int b) {
21     return (a > b) ? a : b;
22 }
```

OUTPUT
Inserted 50, Current Tree Height: 1
